

Great Lakes Greenhouses is a large greenhouse operation in Leamington, Ontario and an industry leader in innovation that is currently seeking a full-time Entomologist that can aid in the development and implementation of rearing protocols for the production of beneficial insects used in the greenhouse industry.

- BS in entomology, biology, or related field or equivalent professional experience
- Knowledge of and experience with scientific experimental design and statistical analysis
- Ability to independently identify and establish rearing protocols for select beneficial insects used onsite in our growing operation
- Ability to correct problems and scale capacity in rearing procedures to accommodate internal beneficial insect production demands
- Conduct research and literature reviews to study insect biology, behaviour and management.
- Collect specimens and manage specimen banks.

Desirable skills:

- MS/PhD in entomology, biology, or related field
- Experience in designing and/or rearing beneficial insects that are used in greenhouse growing environments

Required experience:

- Plant biology (suggested): 1 year
- Entomology (suggested): 1 year
- Agriculture (suggested): 1 year

Job Type: Full-time
